FAJAR SETYADI

Data Analyst | Business Intelligence Analyst

Jakarta Selatan, Indonesia • +62 896-3052-7099 • Fajarsetyadilucky@gmail.com • linkedin.com/in/fajar-setyadi • github.com/fajarsetyadilucky

PROFESSIONAL SUMMARY

Results-driven **Data Analyst & Business Intelligence Analyst** with **5+ years of experience** turning large-scale transactional and financial datasets into high-impact executive dashboards and automated analytical engines. Proven track record in regional government financial management (**BPKAD**), consolidating multi-source budgetary and asset records across **26 regional units** and optimizing fiscal reporting turnaround by **75%**. Deep technical expertise in **PostgreSQL 15+** (advanced SQL, declarative partitioning, composite indexing, and 98.3% query optimization), **Power BI** (Star Schema modeling, advanced DAX, and executive storytelling), and **Python** (Pandas, cohort analysis, and statistical testing). Adept at bridging technical data engineering with commercial C-level strategy to identify revenue leakages, optimize unit economics, and drive data-backed decision-making.

CORE TECHNICAL SKILLS

Databases & Query Engines: PostgreSQL 15+, SQL (Advanced CTEs, Window Functions, Declarative Partitioning, Composite & Partial Indexing, Query Plan Optimization / EXPLAIN ANALYZE, DDL/DML, Constraints, Foreign Keys)

Business Intelligence & Modeling: Power BI, DAX (Time Intelligence, Iterators, Custom Measures, Cumulative Aggregations), Star Schema & Dimensional Modeling (Kimball), Power Query (M), Interactive Dashboards, KPI Tracking

Programming & Analytics: Python (Pandas, NumPy, Matplotlib, Seaborn), Advanced Microsoft Excel / Google Sheets (PivotTables, XLOOKUP, Dynamic Arrays, Power Pivot), Statistical Testing (A/B Testing), Cohort Retention Analysis

Domain & Methodologies: Financial Reconciliation, Unit Economics, Margin Variance Analysis, Supply Chain & Inventory Analytics, SLA Dispute Auditing, Data Governance, Quality Control & Pipeline Automation

PROFESSIONAL EXPERIENCE

Badan Pengelola Keuangan dan Aset Daerah (BPKAD) Kabupaten Lampung Tengah — 2020 – 2025

Data & Financial Reporting Analyst *(Regional Government Financial & Asset Authority)*

- **Financial Data Consolidation:** Consolidated, cleaned, and audited multi-source budgetary and asset valuation data across **26 regional operational units (OPD)**, maintaining 100% data integrity and regulatory compliance for regional budget (APBD) governance.
- **Reporting Pipeline Automation:** Architected automated reporting workflows and interactive dashboards using **Power BI** and advanced **Excel**, reducing monthly reporting cycle times by **75%** (from 5 business days to under 4 hours) while eliminating manual data entry bottlenecks.
- **Budgetary Discrepancy Auditing:** Executed forensic variance analysis and discrepancy tracking across hundreds of billions of Rupiah in regional expenditures, identifying budgetary misallocations and safeguarding regional fiscal health.
- **Data Quality & Validation Frameworks:** Engineered automated validation routines and multi-table reconciliation checks, driving down cross-departmental reporting errors and discrepancies by **90%**.
- **Executive Stakeholder Communication:** Authored and presented executive fiscal summary reports to department directors and cross-functional teams, translating complex multi-table financial data into clear, actionable policy and resource allocation recommendations.

FEATURED ENGINEERING & ANALYTICS PROJECTS

1. Omnichannel Retail Supply Chain Analytics Engine

github.com/.../Omnichannel-Retail-Supply-Chain-Analytics-Engine

Tech Stack: PostgreSQL 15+, Database Architecture, Partitioning, Composite Indexing, Query Optimization, Financial Forensics

- **Database Architecture & Partitioning:** Engineered an enterprise relational database schema on **609,769 transaction rows** across 50 retail branches and 3 regional distribution centers, utilizing declarative range partitioning and relational integrity constraints.
- **Query Optimization (98.3% Latency Drop):** Designed composite B-Tree indexes, partial indexes, and optimized query execution plans, slashing query latency from **8,420 ms down to 140 ms (98.3% speedup)** to eliminate lock contention on POS transaction servers.
- **Forensic Margin Recovery (Rp 18.3B Impact):** Formulated advanced SQL models resolving critical profit leakages: mitigated **Rp 5.7B** lost sales via automated *Ghost Stockout* detection using Window Function LAG( ), reconciled **Rp 3.2B** in overdue vendor penalties via *Tiered Grace-Period* SLA audit trails, and recovered **Rp 4.9B** in delivery margins by restructuring express 3-hour unit economics.
- **Customer Lifecycle Analytics:** Built a 12-month cohort retention matrix identifying an 86% Month-2 drop-off, establishing a "Golden Re-engagement Window" on Days 14–21 to safeguard **Rp 4.5B** in customer lifetime value (LTV).

2. Enterprise Commercial BI & Executive Performance Dashboard

github.com/fajarsetyadilucky

Tech Stack: Power BI, Advanced DAX, Star Schema Modeling, Power Query, Dimensional Modeling (Kimball)

- **Star Schema Data Modeling:** Architected an optimized dimensional star schema (Kimball methodology) integrating 50,000+ multi-channel sales transactions, customer demographics, and product hierarchies.
- **Advanced DAX & Metrics Engineering:** Programmed 25+ dynamic DAX measures including Time Intelligence (MoM, YoY growth, YTD), rolling 90-day moving averages, and cross-channel margin contribution variances.
- **Executive UI/UX & Drill-Through:** Built a multi-page interactive executive interface featuring granular drill-through paths (Region → Store → SKU), dynamic KPI status indicators, and Row-Level Security (RLS) for multi-tiered management access.

3. Customer Lifecycle & Behavioral Analytics Engine

github.com/fajarsetyadilucky

Tech Stack: Python (Pandas, NumPy, Seaborn), Statistical Hypothesis Testing, RFM Segmentation, Cohort Modeling

- **Hypothesis & A/B Testing:** Conducted end-to-end statistical hypothesis testing (t-test, Chi-square) on multi-variant customer engagement experiments, determining statistically significant conversion drivers ($p < 0.05$) to optimize digital marketing spend.
- **RFM Customer Segmentation:** Implemented RFM (Recency, Frequency, Monetary) clustering and lifetime value (LTV) models using **Python (Pandas, Seaborn)**, segmenting users into targeted retention and win-back cohorts.
- **Automated Data Cleaning Pipeline:** Developed modular Python scripts for data validation, handling null distributions, anomaly detection, and standardizing product taxonomic hierarchies for enterprise BI consumption.

EDUCATION & CERTIFICATIONS

Bachelor of Informatics Engineering (S.Kom / Teknik Informatika)

2015 – 2020

Institut Informatika & Bisnis (IIB) Darmajaya, Lampung

Relevant Coursework: Database Systems, Algorithms & Data Structures, Software Engineering, Object-Oriented Programming, Statistical Analysis

Certifications: Business Intelligence & Data Analytics Specialist (Digital Skola) • Advanced Excel for Business & Data Analysis (Digital Skola) • MTA: Software & Application Development Fundamentals (Microsoft)
